TREE STAKE DEEP WATER KIT

*Water Smarter, Grow Stronger.
Deep watering irrigation for trees.*

Works under 40 PSI

Deep Watering
Encourages strong
root growth

Healthier Trees
Promotes long-term
tree vitality

Saves Time & Water
Efficient irrigation
that lasts

KDRIP-IT TREE KIT

Instructions Guide

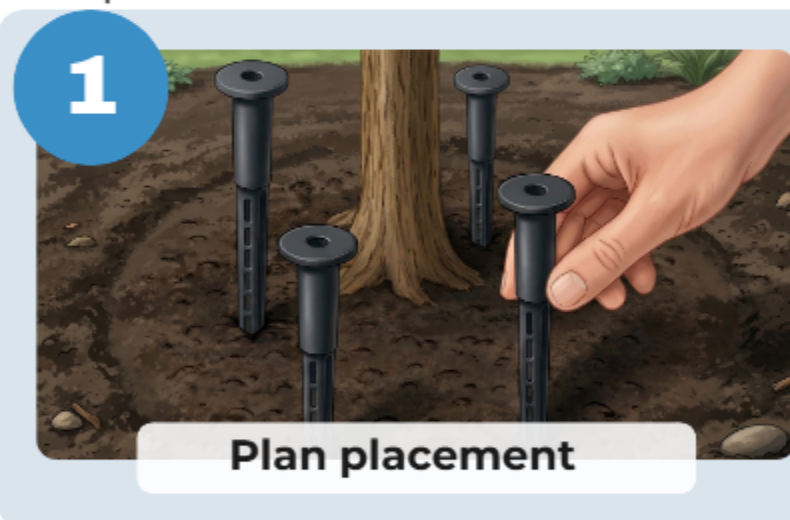

KDRIP-IT TREE STAKE DEEP WATER KIT

Water Smarter, Grow Stronger.
Deep watering irrigation for trees.

INSTALLATION GUIDE

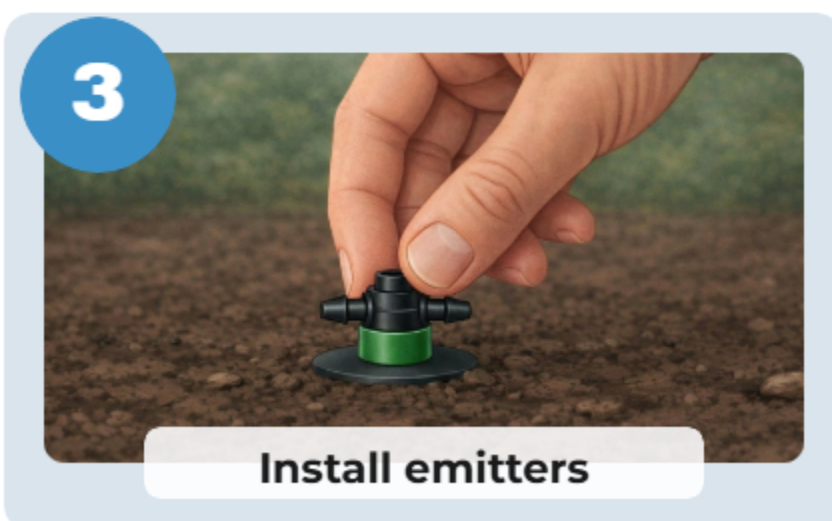

- 1. Plan stake placement:** Position the 4 stakes in an evenly spaced ring around the tree trunk. Space stakes in a square or diamond pattern.
- 2. Prepare the soil:** If compacted, dry, or clay-heavy, water the area a day before. For very hard soil, pre-poke a pilot hole using a screwdriver, metal rod, or similar tool.
- 3. Insert plug and drive stake:** Place the optional plug into the bottom. Insert pointed-end down, push by hand as far as possible, then use a rubber mallet to drive flush with the ground.
- 4. Install emitters:** Press-fit one 4 GPH emitter plug into the top of each stake.
- 5. Connect drip tubing:** Run 1/4 in. drip tubing from your mainline. Use the included tee fittings to branch and connect each stake in sequence, forming a ring around the tree.
- 6. Connect to irrigation system:** Tie into your drip mainline using the connection adapter. Add a pressure regulator upstream if needed. Turn on water and test for leaks.

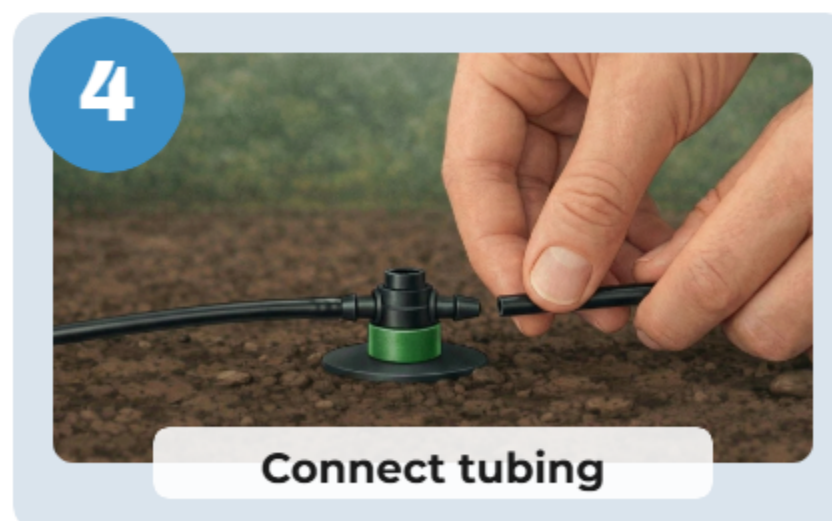

Plan placement

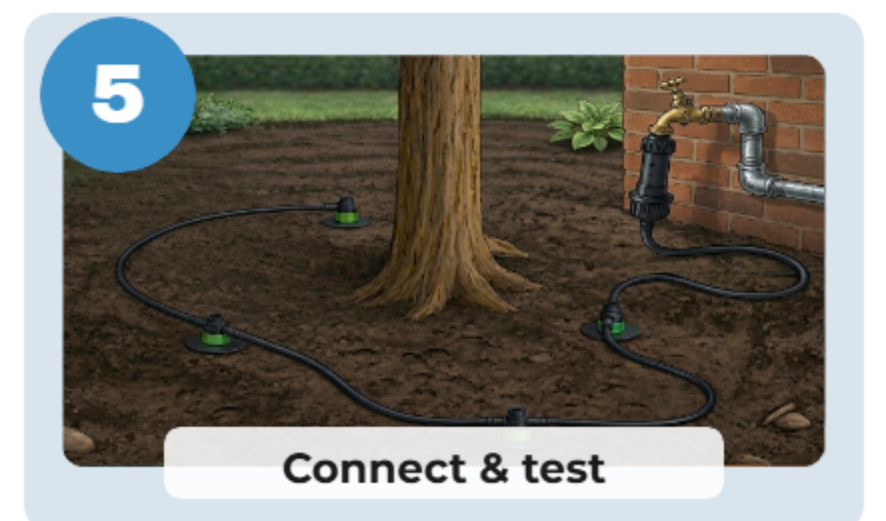

Prepare soil, drive stakes,
by hand or rubber mallet

Install emitters

Connect tubing

Connect & test

Works under 40 PSI

IMPORTANT SAFETY NOTES

- Do not force into rocky soil.
- Do not strike at an angle.
- Do not attach a garden hose directly to the stake.
- Avoid placing stakes too close to the trunk.
- Use a pressure regulator upstream.
